

CryptoCache

CryptoCache is a project built to test and reinforce what you learned while working on the Code Snippets Angular 5 web application. When finished, this product will allow you to store your owned cryptocurrency amounts in your browser. No sensitive information, just balances. So here's what you need to know.

Requirements

This product will contain:

- ☑ A repeatable card component which shall have the following properties:
 - ☑ An edit/done button
 - ☑ Currency name
 - ☑ Currency abbreviation
 - ☑ Amount of coin you own
 - ☑ Amount you have spent on that coin in USD
 - ☑ A delete button in the top left corner, which shall only be visible in edit mode
- ☑ A top bar containing:
 - ☑ The CryptoCache branding text
 - ☑ A button to add currency
- ☑ This application shall be mobile-friendly, with the help of flex box.
- ☑ When the "Add Currency" button is pressed, a new empty card will be generated.
- ☑ It shall match the provided designs as accurately as possible.
 - ☑ For font, I'd suggest the "Ropa Sans" Google font.
